

SUNR Circle — New Laptop Setup Guide

Complaint Management System · Complete Developer Setup

Flutter Mobile + Next.js Admin Panel + Supabase Backend

GitHub: <https://github.com/ritesh-vyas-bacancy/sunr-circle> · Admin Panel: <https://admin-pi-blue.vercel.app> ·

Version 1.0.0

Overview

This guide walks you through setting up the SUNR Circle project on a new Windows laptop with Android Studio. After completing all steps, you will be able to run the Flutter mobile app on an Android emulator or physical device, and the Next.js admin panel locally.

Component	Technology	Purpose
Mobile App	Flutter 3.x + Riverpod	Call Centre, Line Man, Top Management
Admin Panel	Next.js 16 + TypeScript	Back Office management & reports
Backend	Supabase (PostgreSQL)	Auth, database, storage, Edge Functions

Step 1 — Install Prerequisites

Install the following tools on the new laptop. The order matters.

#	Tool	Version	Download URL	Note
1	Git	Latest	git-scm.com/download/win	Required first
2	Node.js	20 LTS+	nodejs.org	Includes npm
3	Flutter SDK	3.19+	docs.flutter.dev/get-started/install/windows	See below
4	Android Studio	Latest	✅ Already installed	Run flutter doctor to link

Flutter SDK Installation

1. Download the Flutter zip from: docs.flutter.dev/get-started/install/windows
2. Extract to `C:\flutter` (do NOT put in Program Files)
3. Add Flutter to PATH:

```
# Run in PowerShell as Administrator
[System.Environment]::SetEnvironmentVariable(
    "PATH",
    $env:PATH + ";C:\flutter\bin",
    "Machine"
)
```

4. Restart PowerShell/Terminal after adding to PATH

Step 2 — Clone the Repository

```
# Open terminal and run:
git clone https://github.com/ritesh-vyas-bacancy/sunr-circle.git
cd sunr-circle
```

The project structure after cloning:

```
sunr-circle/
├── apps/
│   ├── admin/           # Next.js 16 Admin Panel
│   ├── mobile/          # Flutter Mobile App
│   └── mobile-web/      # Vite web demo
├── supabase/            # SQL migrations, Edge Functions
├── docs/                 # Documentation
└── scripts/              # Utility scripts
```

1

```
cd apps/admin
npm install
```

2

```
copy .env.example .env.local
```

Open `.env.local` in a text editor and fill in the values below:

```
# apps/admin/.env.local - copy these exact values

NEXT_PUBLIC_SUPABASE_URL=https://oaftuyikaxgzlyyzgenk.supabase.co

NEXT_PUBLIC_SUPABASE_ANON_KEY=eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJpc3MiOiJzdXBhYmFzZSI6InJlZiI6Im
```

```
SUPABASE_SERVICE_ROLE_KEY=eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJpc3MiOiJzdXBhYmFzZSI6InJlZiI6Im9hZn
```

```
AUTH_SECRET=sunr-circle-auth-secret-key-2024-production-ready

AUTH_URL=http://localhost:3000

NEXT_PUBLIC_APP_NAME=SUNR Circle Admin

NEXT_PUBLIC_ENVIRONMENT=development

NEXT_PUBLIC_ORG_ASSETS_BUCKET=org-assets

NEXT_PUBLIC_COMPLAINT_ATTACHMENTS_BUCKET=complaint-attachments
```

3

```
npm run dev
```

Open browser at: <http://localhost:3000>

1

flutter doctor

Expected output (all green ticks):

```
[✓] Flutter (Channel stable)
[✓] Windows Version
[✓] Android toolchain
[✓] Android Studio
[✓] Connected device
```

Fix any issues shown by `flutter doctor` before continuing.

2

```
cd apps/mobile
copy .env.example .env
```

Open `.env` and fill in:

[illegible]

3

```
flutter pub get
```

1

Open Android Studio → Device Manager → Start an emulator (or connect a physical Android phone via USB)

```
flutter run --dart-define-from-file=.env
```

The app will install and launch on your emulator/device automatically.

 **Syncfusion Charts Note:** The Statistics screen uses Syncfusion charts which require a free community license key. Register at syncfusion.com/products/communitylicense and add the key in `lib/main.dart` before `WidgetsFlutterBinding.ensureInitialized()` :

```
SyncfusionLicense.registerLicense('YOUR_LICENSE_KEY_HERE');
```

Step 5 — Test Login Credentials

Role	Email	Password	App
Back Office	admin@sunrcircle.in	Admin@Sunr2024	Admin Panel
Top Management	manager@sunrcircle.in	Manager@Sunr2024	Both
Call Centre	callcentre@sunrcircle.in	CallCentre@Sunr2024	Mobile App
Line Man	lineman@sunrcircle.in	LineMen@Sunr2024	Mobile App

Build Commands Reference

Admin Panel

```
npm run dev          # Development server at localhost:3000
npm run build         # Production build
npm run type-check    # TypeScript check
npm run lint          # ESLint check
```

Flutter Mobile

```
flutter run --dart-define-from-file=.env      # Run on device/emulator
flutter build apk --release --dart-define-from-file=.env  # Debug APK
flutter analyze                                # Static analysis
flutter test                                    # Run tests
```

Git Workflow

```
git pull origin main          # Get latest code
git checkout -b feature/your-feature  # Create feature branch
git add . && git commit -m "feat: ..." # Commit changes
git push origin feature/your-feature  # Push to GitHub
```

Setup Verification Checklist

- ☐ Git installed and `git --version` works
- ☐ Node.js 20+ installed and `node --version` works

- ☐ Flutter SDK installed at `C:\flutter`
- ☐ Flutter added to system PATH
- ☐ `flutter doctor` shows all green (no red X)
- ☐ Android Studio linked to Flutter (shown in flutter doctor)
- ☐ Repository cloned from GitHub
- ☐ `apps/admin/.env.local` created with correct values
- ☐ `apps/mobile/.env` created with correct values
- ☐ Admin panel runs at `http://localhost:3000`
- ☐ Admin panel login works with `admin@sunrcircle.in`
- ☐ Flutter app runs on emulator or physical device
- ☐ Flutter login works with `callcentre@sunrcircle.in`

Common Issues & Solutions

Flutter — "flutter" is not recognized

Flutter is not in PATH. Run in PowerShell as Administrator:

```
[System.Environment]::SetEnvironmentVariable(
    "PATH", $env:PATH + ";C:\flutter\bin", "Machine"
)
```

Then restart the terminal completely.

Admin Panel — "This page couldn't load"

This is usually an environment variable issue. Verify your `.env.local` file has all the required values from Step 3. Restart the dev server after editing.

Flutter — No connected devices

1. Open Android Studio → Device Manager → Start an AVD emulator, OR
2. Connect an Android phone via USB → Enable USB Debugging in Developer Options, OR
3. Run `flutter devices` to list available devices

Admin Panel — Next.js build error

```
cd apps/admin
npm install      # Reinstall dependencies
npm run build    # Test production build
```

✅ **Need Help?** All source code is in GitHub. The live admin panel at <https://admin-pi-blue.vercel.app> connects to the same Supabase database, so you can always verify data through the web even if local setup has issues.
